Henrietta the Hippo.ind

Henrietta

Once upon a time, in a land far, far away, there lived a baby hippo named Henrietta. Henrietta was born in a beautiful, green river that flowed through the heart of the land. She was the happiest baby hippo you could imagine, with a big, goofy grin on her face and a twinkle in her eye.

Hemibella loved nothing more than to splash and play in the cool, clear waters of the river. She would chase fish, spin in circles, and leap out of the water to somersault through the air. She was the most agile and playful hippo in the whole land.

One day, when Henrietta was out playing in the river, she heard a strange noise coming from the banks of the river. She turned to see what it was, and to her surprise, she saw a group of humans approaching. Henrietta had never seen humans before, and she was curious. She swam over to the bank to get a closer look.

DALL·E 2022-12-05 10:45:43 - a hippo made out of

What is the stable-isotope-ecology of the common hippopotamus?

Stable carbon isotopes can distinguish browsing and grazing behavior in East Africa where virtually all grasses utilize the C 3 photosynthetic pathway and browse plants (e.g. trees, shrubs, forbs) use the C 4 pathway. The two pathways have different 13 C/12 C ratios. Dietary differences are recorded in developing tissues of mammals with relatively constant isotopic fractionation (Cerling & Harris, 1989; Passay & al., 2005b) and provide insight into an individual's diet.
